Summary

Software engineer with 8+ years building systems that external organisations depend on: enterprise clients at a consultancy, partner banks and fintechs in embedded finance, and mainframe operators at Rocket Software. Used to owning a problem end to end — scoping it with non-technical stakeholders, then building and shipping it. Works in TypeScript and Python, with Node.js, MongoDB, Docker and IBM z/OS experience, and postgraduate coursework in software security.

Experience

Frontend Engineer — Equals · May 2025 – present · White-label & Design System team, Vilnius

- Build white-label products that partner banks and fintechs configure and ship to their own customers, adapting to each partner's brand, data and regulatory constraints.
- Build and maintain components across the two design systems that came out of the Equals Money–Railr merger, used by product teams in both codebases.
- Use AI agents throughout the development workflow for scaffolding, tests, review and automation.

Frontend Engineer — Railr · Dec 2021 – May 2025 · Embedded finance / Banking-as-a-Service

- Built and maintained the customer-facing self-service application business customers used to operate their card programmes.
- Built an internal tool for surfacing financial data on our customers and their end users.
- Helped maintain the component library behind the core products.

Software Engineer — Rocket Software · Aug 2020 – Dec 2021

- Rewrote a monitoring application plugin for Zowe, the open-source framework for IBM z/OS, working against mainframe systems and their operational constraints.
- Contributed to IBM's Carbon Design System and maintained the internal component library.

Software Engineer — sd house · Mar 2021 – Jun 2021 · Freelance

- Delivered a cross-platform workforce scheduler for one of Lithuania's largest furniture manufacturers, and an office reservation system with COVID contact-tracing.

Software Engineer — Zenitech · Feb 2018 – Aug 2020 · Client-delivery consultancy, Vilnius

- Embedded with enterprise clients to scope requirements and deliver bespoke systems end to end: a student assessment platform for the University of Cambridge, and a search platform for Kobalt Music over a large catalogue of rights data.
- Built a cross-platform mobile application for receipt storage and warranty tracking.

Education

Blekinge Institute of Technology — Master's coursework, Software Security & Malware Analysis

Vilnius University — BSc, Computer Software Engineering, 2014–2018

Skills & details

Languages TypeScript, JavaScript, Python, HTML/CSS · Frameworks React, Next.js, Node.js, React Native, Redux · Data & infra MongoDB, Docker, Git, IBM z/OS (Zowe)

Spoken Lithuanian (native), English (fluent) · Eligibility Lithuanian national, able to obtain security clearance; open to travel and to relocation within Europe
